DETAILED ACTION

Applicant is requested to send in an English translation of the German reference, Irie et al (DE 3909772).

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the sensor means including two reference sensors that are displaced from each other along a circumferential direction of the main shaft must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 4, 5, and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention,

In claim 1 (and the dependent claims, as applicable), the use of the following terms lack antecedent basis: "the main shaft", "said sensor means", "the main shaft/engine piston", "the angle position", "the angular speed". The term "reference means", "index reference means", "index sensor", and "resolver" are unclear. Please explain what these terms mean, or use terms that are more representative of the meaning being indicated.

In line 6 of claim 1 "thereby also position of the piston sensor means detecting position of the reference means and thereby angular position as well as angular speed" is unclear. In line 8 of claim 1 the subject matter of "which" is unclear. In line 11 of claim 1 "it" is unclear, as there is no clear indication as to which element "it" refers to. In lines 14-15 of claim 1, there is no clear subject or purpose for the phrase "for detecting speed...parameters"

Regarding claim 4, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d), and "the flywheel" lacks antecedent basis.

Response to Arguments

Applicant's arguments with respect to claims 1, 4, 5, and 11 have been considered but are moot in view of the new ground(s) of rejection.
